'Transit' in The Odd Collection', Pollen Studios and Gallery, Belfast

'Transit' is a video work produced as part of the body of work 'Another Day in Futile Battle Against the 2nd Law'. The work documents leafing through archival records of nightly observations by astronomers at Armagh Observatory. As well as noting the nightly positioning of the stars this ledger records other celestial events including the planetary transit of the sun. The ledger also faithfully records viewing conditions even when observations couldn't be made because of clouding out. Armagh Observatory has been recording meteorological data on a daily basis since July 1795. This work was facilitated by Armagh Observatory and Planetarium. The video work was shown in the exhibition 'The Odd Collection' at Pollen Studios and Gallery, Belfast

Cabinets of Curiosity, also known as 'wonder rooms' have displayed collections since at least the 1500's. They have been used to categorise natural history objects, tell stories about the world and it's history (sometimes not letting the truth get in the way of a good story) and served to establish a social ranking in society. The Odd Collection exhibition was inspired by the odd collection of favoured objects and the collection of odd objects that find their way into our homes and especially artists studios. With invited artists, we will convert the Pollen Gallery into a 'wonder room', with a nod to the history of museum natural science collections and wink to the possibilities of undiscovered treasures.
