Appendix 3
CMIC Model of Maternal Risk and Healthcare Evaluation for Conflict Regions of Myanmar

Culture
- Identification of values, beliefs and traditions of ethnic groups related to maternal health
- Evaluation of family/community support and capacity
- Assessment of knowledge, attitude and practices of risk of complications in early postnatal stage
- Identification of cultural strengths in maternal and infant healthcare

Context
- Legacy and impact of conflict/trauma/human rights abuses
- Evaluation of infrastructure including roads, electricity, water, communication etc
- Evaluation of community strengths/resources including structure, leadership etc
- Availability/access to care within local/district level

Infant Care
- Availability and quality of care of infant during labour and delivery
- Quality and practices of care of neonate
- Initiation and support of breastfeeding
- Identification and quality of treatment of neonatal complications

Maternal Healthcare
- Availability and quality of antenatal care
- Practices and quality of labour and delivery
- Role and practices of postnatal care of mother
- Access to skilled emergency obstetric and new born care and recognition of risk

Risks to maternal and infant health in remote areas of ethnic conflict regions
